

Road Safety

Road Accidents in India – A Grim Scenario

- Five lakh accidents reported in 2015 alone, killing 1,46,000 people
- A grave road accident occurs every minute and 16 innocent lives are lost on our roads every hour
- Road accidents shave 3% off our country's GDP every year. Estimated annual loss due to the road accidents stands at INR 4,000,000,000,000
- Drivers' fault is observed as the single most responsible factor, accounting for 77% of total road accidents in 2015

Dharani Supply Chain Associates Pvt Ltd

Dharani Supply Chain Associates Pvt Ltd has launched a skill development center with the objective of enhancing overall skill levels of heavy vehicle drivers. The tailored REFRESHER COURSES provided at the facility envision to improve the safety of the drivers, passengers along with the cargo and vehicles.

For the very first time in Andhra Pradesh, a state-of-the-art heavy vehicle simulator has been set up by Dharani Supply Chain Associates in the city of Guntur. With high-end features that customize virtual simulations specific to scenarios, the designed programs are aimed at developing the capabilities of heavy vehicle drivers

BUS/TRUCK Simulator

Simulator-based training provides the opportunity to train drivers in a potentially safer environment at lower costs than traditional behind-the-wheel (BTW) training methods.

Experienced Drivers

Experienced drivers can test & sharpen their driving skills through advanced driving modules which include driving in extreme weather and road conditions. Emergency object intrusion allows the drivers to test their reaction time & level of alertness while driving.

Novice Drivers

Tailored modules are designed for novice drivers with focus on basics along with traffic rules & road signs. It includes practice sessions for moving off, gear shifting, steering control, driving in hills, maneuvering in heavy traffic etc.

“Andhra Pradesh’s very first simulation based skill development center set up by the finest and well known Supply Chain experts”

Ability to use repetition is the key

Drivers practice things over and over in a simulator at a much faster pace compared to an actual vehicle. It is through this that they will acquire what is called as “**conditioned response**” - repetitive exercises until the response becomes almost second nature to a person.

Moreover, simulator experience helps drivers acquire the expertise of controlling their emotions when confronted with threatening situations in real life. It also boosts their self-confidence after having mastered the skills necessary to safely operate in such conditions.

BUS/TRUCK SIMULATOR

Key Features

- Realistic virtual environment
- High degree of visual realism
- Extensive instructor interface enable instructor to edit create custom exercises
- Integrated hi-performance 3D sound system producing realistic engine & real world sounds
- Simulation-based training can quickly and easily record driver performance metrics, which are typically much superior in truck simulators as compared to real trucks
- Cost savings in terms of reduced wear and maintenance allow drivers to make mistakes during the training process without damaging property or equipment, and in highly controlled environments thus reducing training time and increase trainee throughput.
